

2023-24 Funding Opportunities

We are pleased to provide incentives and opportunities to support survey affordability. Simply adding a supplemental module to your current survey administration will enable you to obtain significantly reduced CalSCHLS services.

The Biennial Survey

Description

The Biennial California Healthy Kids Survey is offered to randomly selected schools every two years. Data from this representative state survey provide the norms for comparison with district CHKS results and have contributed to a better understanding of how to address the state's needs regarding school climate and safety, pupil engagement, academic performance, and overall student well-being.

Next Steps

To take advantage of this opportunity, you must be part of the randomly selected sample. You may contact your TA to inquire, or they will reach out to districts that have been selected.

Behavioral Health Module

Description

A multiform survey module that assesses secondary student **well-being indicators** (i.e., social isolation, body image and disordered eating, responses to trauma (PTSD symptoms), precursors to and consequences of substance use) and **protective factors** (i.e., home adult supports, peer supports, and school mental health supports).

For additional details, please see the [Behavioral Health Module Invitation](#).

Next Steps

To take advantage of this opportunity, speak to your TA about adding this module to your CHKS survey. Once this module is added, it will be administered with the rest of the survey.

If you have additional questions, please email calschls@wested.org with a clear subject line so we can route your question to the appropriate support personnel.
